

HOW TO TRANSFER DNA PROFILES TO DQ DATABASE

Please note this only is required if dogs were DNA profiled with Orivet prior to 1/1/18 ie. (Prior to the agreement with DQ). All dogs tested after this date will have their DNA Profile automatically transferred to Dogs QLD database.

STEP 1 Log into your account and click on the **Transfer My Animals** tab

STEP 2 Select the animal(s) that you wish to transfer from the "Available Animals". **Only** the DNA profiles (**no disease or trait results**) will be transferred to the nominated database – in this case it is Dogs QLD if your membership number is in your profile. Click on the **ADD** icon. Once you have added all the animals you wish to transfer click on the **Transfer Selected Animals** tab.

Please check the animal's report first to ensure that it reflects the **Approved Collection Method (ACM)** Requirements (some older cases may need their reports updated on the website as they were rolled over from our old database without an approved collection method – please let us know if this is the case and we will happily update based on initial paperwork submitted with sample).
